ABSTRACT

This Application is useful for students to easy referring of books and it is used to save the time of students. It mainly consists of different modules every module is connected to other module. In this application we mainly use the QR code .If we scan the QR code it will give you the complete structure of library ,and we can give any book name or author name or code of the book in the search box then it will give you the rack number and Number of books available on that name of the book and author name as the result in your Application.

Key words: QR code, Library, search box, author name.

1. INTRODUCTION

A library is a gathering of books on different subjects. A private library has a place with a specific person. An open library [1] is intended for the utilization surprisingly who pay participation to it and are enrolled as people. There are furthermore free open libraries. A private library reflects the taste or the individual inclinations of its proprietor. Here books are picked by the proprietor's judgment and necessities[2]. Thusly it typically has an inclination for some explicit subject or subjects. Habitually a fair private library is given to the all inclusive community after the proprietor's end. Open libraries may be planned for general per user, and this contains books in regards to all issues. Or of course, they may have books of a specific sort .Pen libraries may be accessible to all or they may be accessible to a select enlistment. The University Library [3] is planned for the usage of the teachers and the understudies of the University. Schools and Colleges likewise have libraries which are utilized by the instructors and the understudies of the specific foundations to which they have a place.

1.1 Libraries and their Readers

A library has various usages and it is the commitment of everyone to be associated with a library. We, in India, have an awful reputation as per users of books. In our Schools and Colleges we all around tie ourselves to the examination of perusing material. Now and then we do peruse books outside the prospectus, yet they are normally books[4]. In case we are people from a good library, we may be pulled in by a variety of books. Courses of action of new books dispersed by a library are a ceaseless impulse to it's per users. There is more over the manager, one of whose commitments is to coordinate the per users in the determination of books.

1.2 Why Libraries are Necessary

Libraries are a requirement for all people who boast about some culture. It is unfathomable for anyone to purchase all of the books that are circulated In a library [4]we can pick the subject in which we are fascinated. A not too bad library in like manner purchases books picked or recommended by the per users. In this way enlistment of a library gives one the shot of getting settled with a broad number and grouping of books.

1.3 Perusers' Conferences

A right hand of a library which altogether grows its utility is the per users' social affairs that are such an extraordinary sum in vogue in Soviet Libraries. Per users get together and talk about the most recent productions and distinctive neighborhood and even near and dear requirements. It invigorates scholarly interest and makes the general population rationally caution. It raises social norms [5]. It additionally keeps the administrators

educated of the requirements of per users. It additionally keeps the administrators educated of the requirements of per users.

1.4 The Importance of Library

The earth of a library [6] is a help to consider. When one finds such an extensive number of per users desire on books, one normally builds up a longing to peruse alone record. It is along these lines that the library propensity is made and created among easy going per users. The significance of Library can't be misrepresented. We can't improve the situation than to make and build up a library development in our nation, and cultivate among easy going per users a far reaching interest for library and a propensity for utilizing libraries for learning and also for diversion.

1.5 Smart Library

Keen library is the portable application which gives the UI to the virtual library. That is savvy library gives client to include, hunt and show the sub tiles of library and the books in the library. Brilliant library gives a simple and helpful path for the client to discover the book which spares a great deal of time and exertion of the client.

2. EXISTING METHOD

A basic employment for clerks all through the accompanying five to ten years is to offer access to online library[7] resources free, open-get to, or purchased, each and every noteworthy resource in a whiz, easy to-use one-stop shop and not to fear running an industrious beta test in which new organizations and limits can be incorporated when fundamental. To fill this activity, chairman and electronic resources chiefs require versatile, interoperable resource disclosure structures reliant on open-source programming. What's more, we should keep on surveying clients' needs and connect by adjusting our frameworks to accommodate their prerequisites; as opposed to anticipating that them should come to us, without a doubt, our exceptionally future relies upon it.

Two decades after the approach of electronic diaries and databases, curators are as yet thinking about approaches to best oversee e-assets related to customary print assets and in the meantime investigate new acquiring activities and practices, for example, request driven obtaining of

electronic books. Also, these seasons of monetary solemnity are making budgetary weights at numerous foundations of advanced education, bringing about administrators advocating their spending on accumulations and asset the executives like never before. Strategies for Electronic Resource Management (TERMS) started in 2008 after a discourse about electronic asset the executives (ERM), current ERM instruments, and what was missing both in current practice and with the frameworks accessible. TERMS develops Peach's electronic assets life cycle and tries to wind up a reference point for the individuals who are new to ERM, the individuals who have all of a sudden moved activity capacities to direct ERM, and the individuals who might need to execute its proposals of best practice.

3. PROPOSED METHOD

Smart library is based o the following aspects:
- For Finding of Books.
- To know correct In
- Formation of books easily.

Finding libraries nearby you.

3.1. Finding Books

To find the correct book in the library we use internet then it shows the track number then the user can find the location

3.2. Correct Information of books

To get the correct information or details about the book the user should register with the correct credentials and then access the account. Once he enters into the site it's the available books in the library.

3.3. Finding Libraries

User may access the nearest libraries through GPS system.

4. RESULTS
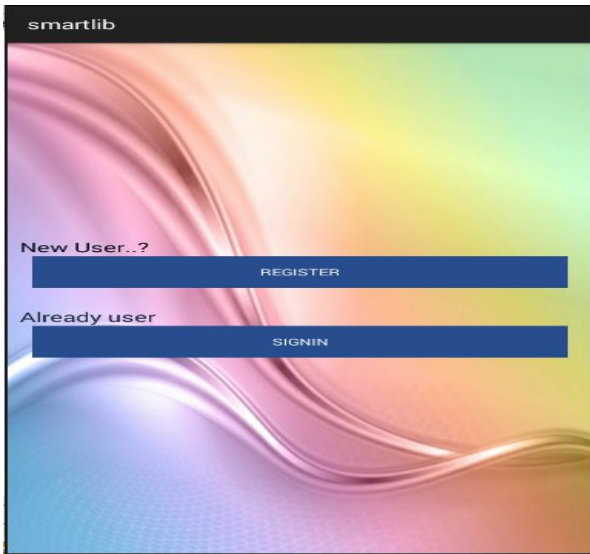

The output of our smart library application is as follows

Figure 1: User Homepage

As shown the figure 1 when the user click on the URL then the home page will be opened.

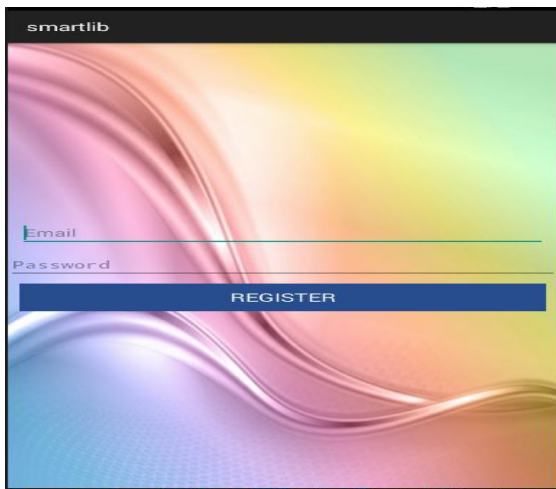

Figure 2: New users should registered by entering email-id and password

As in figure 2 to register any new user can enter their registered email and password then they will enter inside the library form,. Figure 3 gives the entry for registered users to access the home page. Figure 4 helps the users to access the books and figure 5 helps to display the list of books by scanning the QR code.

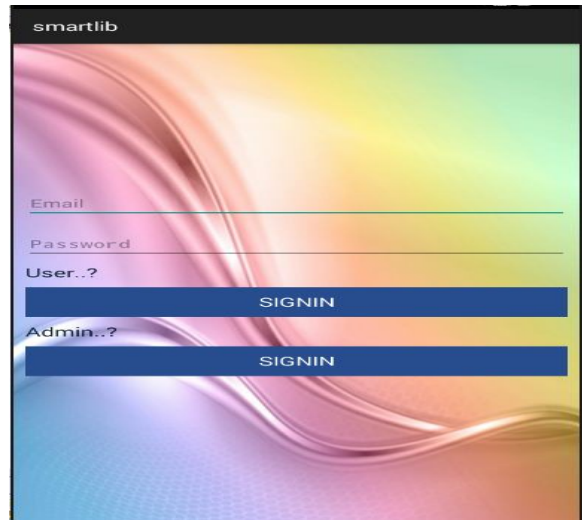

**Figure 3:** Registered users can access the home page by entering mail-id and password

Figure 4: Users can access any book by entering book name in the user's page

Figure 5: By scanning the QR code then it displays the list of books

5. CONCLUSION

In this report, Application is proposed for students to easy referring of books and it is saves the time of students. It mainly consists of different modules every module is connected to other module. We scan the QR code which give the complete structure of library .We can search any book with its name or author name or code of the book in the search box and it will give you the rack number and Number of books available on that name of the book and author name as the result .

6. FUTURE ENHANCEMENT

In future we would like to add the following modules in the present version of the application.
1. Finding libraries nearby.
2. History of intake books.
3. Can pay fine though the application.
4. Improve user interface
5. Provides user to chat with the management in case of any issues.
